

iD Bus Management Panel

The Bus Management Module is used to distribute the communications bus to and from all iD Active patch panels and the respective Closet Controller. The bus Management Module is located on the rear of a 1u cable management bar. For very compact communication cabinets the Management Module may be removed from the Cable Manager and located elsewhere in the Rack

Produced in the HellermannTyton UK production facility under exacting ISO9000-2000 quality standards, the system offers the end-user the perfect combination of price, performance and quality.

Features and Benefits

- **Compact design (1U)**
- **Connectivity for up to 6 iD Active panels**
- **Clear indication**
- **Simple connectivity (shielded Cat5e cords)**
- **Standard shielded Cat5e RJ45 jacks**
- **Bus Manager can be removed and relocated**
- **Manage bus communication cords**
- **Patch cord management**
- **LED for power indication**

Technical Description

Connections are all standard shielded RJ45's. Two connections allow the Bus In and Bus Out connections and up to 6 patch panel connections.

All Bus cords must be kept to the shortest possible length and are distinguished by the red PVC boot.

The Bus Management Module features cable tie loops located at each end, for situations where the space is at a premium and few cable managers are being used. The Module can be located in the cabinet elsewhere. The

Bus Management Module also features the ability to inject an external power source to extend the communications bus length. The integrated LED indicates whether the power is local (Red) or remote (Green).

Please read the supporting documentation for bus length guide lines and power permutations.
